

## EB-Therm 55

Underfloor heating thermostat with analogue control knob. EB-Therm 55 is the solution when you want a simple thermostat.

All our thermostats are digital and microprocessor controlled. This technology means that the thermostat collects data from the time it is started up and uses this to calculate when to turn on and off. This keeps temperature fluctuations to a minimum, which gives an even heat and lower energy consumption. The temperature in the floor fluctuates less than  $\pm 0.3^{\circ}\text{C}$ .

The EB-Therm 55 thermostat is now equipped with a room sensor and can be used in three different ways: as a floor thermostat, room thermostat or a combination of the two.
